Certified Backflow Tester Listing

For your convenience, Goleta Water District has compiled a list of American Water Works Association (AWWA) certified backflow assembly testers that have registered with us and are authorized to perform work within our jurisdiction.

Goleta Water District does not recommend, endorse, or warrant the work of any individual or company listed. The information listed may have changed; it is your responsibility to verify that the operator has a valid certification at the time of testing.

All newly installed or replaced backflow prevention assemblies must be on the **USC list of approved devices**, be lead free and installed according to District Standards. A specification sheet from the manufacturer must be submitted to the District for approval before installation.

Backflow prevention assemblies must be inspected by Goleta Water District prior to initial testing and activation. Please notify the District's Cross Connection Specialist in advance to schedule an inspection. A test report form will be provided to the Certified Tester.

For additional information about the District's **Cross Connection Control Program** please contact:

Backflow Prevention

- ☑ Required by state and federal law
- ☑ Annual testing required
- ☑ Keeps drinking water clean and safe

What is Backflow?

Backflow is the undesirable reversal of flow of water into the District's water system.

Backflow Prevention Assembly

Any approved device used to prevent backflow into a potable water system.

Common Cross-Connection Examples

These common household and commercial connections can pose a threat to the public water system if not protected by the appropriate Backflow Prevention Assembly.
